

MONIAIVE INITIATIVE

Statement of Intent 2025-26

Connecting Glencairn

We will use the Glencairn and Moniaive Action Plan (GMAP) 2022-2027 to inform decision making on development of our projects, including:

Sustainable Transport:

- We will participate in the N76 Sustainable Transport Network
- We will use the Glencairn Sustainable Transport Plan to guide future transport projects.
- We will continue to offer support to Cairn Valley Community Transport.
- We will monitor public transport provision and be ready to advocate for our community if our public transport services come under threat.
- We will work with interested organisations and key stakeholders to raise awareness of pedestrian and traffic issues across Glencairn.

Economic Regeneration:

- We will continue to place Health & Wellbeing provision at the front of our work on economic resilience.
- We will work in partnership with local organisations to support Heritage and Cultural provision in Glencairn.
- Through the Hive and the Repair Cafe, we will seek to expand community access to the circular economy. We will promote Reduce, Reuse, and Repair of resources.

Community Land Access:

- We will work with Glencairn Land & Woods Trust (GL&WT), John Corrie Wildlife Garden (JCWG), Glencairn Community Council and other interested parties in support of improved community land access.
- We will seek access to land for community-led and land-based projects, including biodiversity improvements, food production and new or improved paths.
- We will promote responsible access under the Scottish Outdoor Access Code (SOAC) and an understanding of the role of landscape management in flood mitigation options.

Resilience and Flooding:

- We will liaise with the GCC and local resilience group to disseminate flood management advice, and to gather information if local flood / emergency events occur.

Affordable Housing

- We will monitor the housing market and investigate options and support mechanisms for bringing empty houses back into use
- We will monitor opportunities to develop new community-owned housing.

Low Carbon Energy

- We will monitor funding and development opportunities that might enable us to participate in community-led renewable and low carbon projects.
